

Preparing the industry for promulgation - Training, training and more training!

Since the publishing of the redraft of the DoH regulations in December 2017, the CTFA has been disseminating details on the requirements in an effort to prepare the industry for the upcoming mandatory requirements.

Through engagement with the Regulator and industry it was clear that there was a gap in terms of the industry's understanding of various aspects of compliance.

CTFA has organised various interventions in 2019 with an aim to explore and train on the various articles of the draft regulations as well as all other associated requirements that industry will have to establish within their individual companies to remain compliant with their product portfolio.
